

Clarion's Commitment to Quality is for Everybody

Newly Developed 6-Layer Multi-Voice Coil Goes beyond Conventional Conception

The system incorporates Dnote digital signal processing technology and a 6-layer multi-voice coil, transmitting multiple digital signals directly to the voice coil to realise a precise cone stroke. By consolidating 6 different vibrational forces, the speaker delivers high-powered high-quality sound.

Space-Saving Processor

The processor features a slim-profile compact design to enable installation in a variety of locations including under the seat.

From Source to Speakers, Digital-to-Digital Changes Audio

Full digital signal transfer from a digital source enables direct input of high-resolution audio sources to the speakers without worrying about sound deterioration. High-quality full digital sound is reproduced, with purity that's true to the original. High-efficiency conversion from digital signals into sound makes the system capable of delivering 4 times the high power output of conventional full digital systems^{*1}, while achieving low power consumption that's only about 1/5th that of analogue systems^{*2}.

Digital Sound Processor Delivers Versatility

Digital sound processor accommodates factory original centre unit as well as those from other manufacturers, and external digital audio equipment. The ability to connect analogue speakers also contributes to the system's versatility.
